

Cardiozen Northeast Regional Formulary Status

Current Quarter Update — Northeast Region

Commercial Payer Status

As of the most recent quarterly update, Cardiozen is on the preferred tier (Tier 2) for the three largest commercial payers in the Northeast region.

UnitedHealthcare requires step therapy through atorvastatin. Aetna requires step therapy through any high-intensity statin. Blue Cross Blue Shield of Massachusetts has no step therapy requirement and accepts Cardiozen as a first-line option for hyperlipidemia patients.

Medicare Part D Status

Medicare Part D plans in the region place Cardiozen on Tier 3 with prior authorization. The PA criteria are aligned with the commercial payer criteria but typically require explicit documentation of statin intolerance or inadequate response to maximally tolerated statin therapy.

Field Implications

Reps in the Northeast should lead with the BCBS-MA story when calling on accounts with high BCBS-MA mix — the absence of step therapy is a significant differentiator versus the rest of the regional payer mix.

For accounts with primarily UnitedHealthcare or Aetna patients, the conversation should pivot to the manufacturer's PA support program, which has cut the average approval turnaround for these payers to under 5 business days.
